

MEDIA = VIRUS

Science used to be progress. It used to be innovation. It used to be improvement of well-being. It still is. Unfortunately with the help of MSM, science has also shown it's darker side. With some doctors and virologists that love the attention and limelight, MSM has created science's own version of woke celebrities.

Bald men are up to 2.5 TIMES more likely to suffer severe COVID-19 than males with a full head of hair, study warns

- Experts noted that more men hospitalised with COVID have pattern baldness
- Researchers recruited 65 men who had contract a severe case of coronavirus
- They looked in part of a gene linked to baldness and male hormone sensitivity
- Men with 22 or more repeating DNA molecules were more at risk from COVID
- The findings may lead to novel therapies or treatments for the coronavirus

Mission IMPOSSIBLE: NASA warns even a nuclear bomb wouldn't stop a giant asteroid heading for Earth after massive six month simulation exercise ends in devastating impact

- The exercise last week was to better understand current in-space preventions
- Simulations created an asteroid spotted on April 19, with impact Oct. 20
- Scientists studied the space rock's size, trajectory and chance of impact
- By Oct. 14, there was a 99% chance of it hitting a part of Europe
- There would not be enough time to send a craft to take the asteroid down
- The team was also unable to determine its size in six months
- This means we could not blow it up, as a nuke may not put a dent in it

PLAGIARISM ALERT:

Better Safe than Sorry

So what do you need to do before zombies...or hurricanes or pandemics for example, actually happen? First of all, you should have an emergency kit in your house. This includes things like water, food, and other supplies to get you through the first couple of days before you can locate a zombie-free refuge camp or in the event of a natural disaster, it will buy you some time until you are able to make your way to an evacuation shelter or utility lines are restored). Below are a few items you should include in your kit, for a full list visit the CDC Emergency page.

- Water (1 gallon per person per day)
- Food (stock up on non-perishable items that you eat regularly)
- Medications (this includes prescription and non-prescription meds)
- Tools and Supplies (utility knife, duct tape, battery powered radio, etc.)
- Sanitation and Hygiene (household bleach, soap, towels, etc.)
- Clothing and Bedding (a change of clothes for each family member and blankets)
- Important documents (copies of your driver's license, passport, and birth certificate to name a few)
- First Aid supplies (although you're a goner if a zombie bites you, you can use these supplies to treat basic cuts and lacerations that you might get during a tornado or hurricane)

Some of the supplies for your emergency kit

THE US HEALTH DEPT HAS LOST THE PLOT

**GET A KIT
MAKE A PLAN
BE PREPARED**

EMERGENCY.CDC.GOV

The selected US expert Dr. A. Fauci:

Take, for instance, Fauci's serenity back on January 21 last year, when he assured us that the virus convulsing China at the time "is not a major threat for the people of the United States and this is not something the citizens of the United States right now should be worried about."

Fauci: ...There's no reason to be walking around with a mask. When you're in the middle of an outbreak, wearing a mask might make people feel a little bit better and it might even block a droplet, but it's not providing the perfect protection that people think that it is. And, often, there are unintended consequences — people keep fiddling with the mask and they keep touching their face.

This incapable scientist superstar is protected from scrutiny. Why?

- The CDC states: 'COVID-19 highlights that health equity is still not a reality as COVID-19 has unequally affected many racial and ethnic minority groups'
- Figures show that for every 100,000 people, 114 white people have died; that's compared to 127 African Americans, 118 Hispanics and 139 Native Americans

"Racism is only ever mentioned if white people are perceived to be in any type of beneficial position regardless of any intent and never the other way around. This perception in itself is racist" - just me

NO ACCOUNTABILITY

Debunked by MSM as early opinion.
The fact is that he was an expert in contagious diseases long before Covid.

The world has lost 20.5 million years of life because of premature Covid-19 deaths - new study

Aria Bendit, Business Insider US
Feb 19, 2021, 08:45 AM

A doctor checks the vital signs of an ICU patient at Providence Cedars-Sinai Tarzana Medical Center in Tarzana, California, on January 5, 2021.

- More than 20.5 million years of life may have been lost globally due to Covid-19, a new study found.
- To calculate years of life lost, researchers compared the ages of people who died of Covid-19 to their average life expectancy.
- People older than 75 represent one-quarter of the years of life lost to the pandemic, the study found. Men have lost more years than women.
- Visit Business Insider for more stories.

Globally, the average person is expected to live until age 73. But the pandemic has cut more than 1 million lives short, according to a new study.

The researchers compared the ages of people when they died of Covid-19 to their average life expectancy. When a person died prematurely, the discrepancy between the two was considered years of life lost to the pandemic.

Fauci says pandemic exposed 'undeniable effects of racism'

Dr. Anthony Fauci said during a graduation speech at Atlanta's Emory University that correcting societal wrongs will take a commitment of decades.

Fauci also seems to be an activist and civil rights expert. Surprised?

Another so-called study with the required ICU photograph.

It assumes that all Covid victims would have died at life expectancy age.

Do the same calculation for deaths of premature babies, TB, AIDS, malaria etc. Due to the much younger average ages for these deaths, the figures would look much worse.

Who can take MSM serious when they publish an article like this and sell it as research?

Please find the real SA Covid stats of age-related deaths as well as those that had no underlying illnesses. Would you publish this?

Eish: If you take 73 years as life expectancy, how can you then include 75 years & older people in such result?

McDonald's to use packaging to promote COVID-19 vaccines

The fast food chain is partnering with the White House and encouraging its customers to get vaccinated.

FACTUAL OR MEANINGLESS?

Could also call it fear sowing based on anticipatory anxiety

- A new threat has emerged in India's fight against COVID - a triple mutant variant of the virus.
- The mutant strain was found in samples in Bengal, and may have evolved from preexisting double mutations.
- Researchers say this could affect vaccine efficacy.
- See more stories on Insider's business page.

As India contends with its second major wave of COVID cases and a double-mutated variant of the virus, it now faces a new threat - a triple-mutant variant.
