

MEDIA = VIRUS

MSM should lead, not mislead. To those who know this or have realised this during the last 20 months: good on you. Unfortunately, it will not stop soon. Misleading headlines and articles have been doing the rounds continuously. By reading more diverse and trusting your own gut, you can easily identify them as they're occurring daily. We're all too aware of this.

What MSM sells you

The complete picture

Former Secretary of State Colin Powell dies of Covid-19 complications aged 84
Alexandra Ma, Business Insider US
Oct 16, 2021, 6:44 PM

i Multiple myeloma is a cancer that forms in a type of white blood cell called a plasma cell. Healthy plasma cells help you fight infections by making antibodies that recognize and attack germs.

2 The chosen expert opinion

Colin Powell dies of COVID-19 complications despite vaccine: Medical experts weigh in

Powell's death is 'wake up call' for eligible adults to receive COVID-19 vaccine booster shots, an expert said

First response: defend the vaccines.
Second response: defend the vaccines.

"The vaccines that we have, and he [Powell] evidently was fully vaccinated, are extraordinarily good against preventing death, hospitalization and severe disease but they are not perfect," Dr. Greg Poland, infectious diseases expert at the Mayo Clinic, told Fox News, adding that depending on patients' age, gender and underlying medical conditions, up to 5% will not be fully protected.

"That is the very reason that we are engaging now in a national dialogue about booster doses," Poland said. Regulators last month authorized a booster dose of the Pfizer-BioNTech COVID-19 vaccine for adults ages 65 and older, and people ages 18-64 at high risk of exposure and severe COVID-19 disease.

3 Why this 84-year old icon really died

His death, medical experts say, underscores the need for COVID-19 vaccine booster shots among older adults and high-risk populations to shore up protection.

Powell was afflicted with other diseases, including Parkinson's and the blood cancer **multiple myeloma**, which could hamper recovery from COVID-19 infection, according to reports. His family didn't specify when Powell received vaccine, or whether he had taken a booster shot.

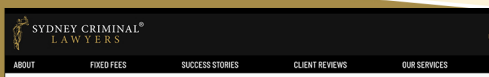

"As a doctor I had many patients with multiple myeloma. Some of them were young and all of them died within a year of making the diagnosis. Any minor infection can overwhelm the immune system already compromised by a cancer like multiple myeloma. He really died from multiple myeloma."

We're watching you, MSM

There are also reports of the police and media propagating misinformation about the events, with protesters asserting, for example, that the claim they urinated on a Melbourne memorial is entirely fabricated – that the source of the urine was a police horse, not protesters.

That report is similar to misinformation that a protester in Sydney assaulted a police horse, a claim debunked by a full viewing of the footage which clearly shows the man's arm raised in an attempt to fend off repeated charges at him by police officers on horses, and that he does not 'assault a horse' at all.

Police Brutality Escalates Under the Cover of COVID

26/09/2021 BY SYDNEY CRIMINAL LAWYERS

Counterproductive

There are concerns the heavy-handed tactics employed by authorities are doing little more than **deepen divisions in the community and embolden protesters**, rather than make people more compliant and accepting of government policies.

And it should be said the past week's events are certainly not first time the actions of police have been questioned during Covid.

Last year, footage emerged of Victorian Police ramming a civilian in the back with their car, before several officers tackled him on the ground. One officer stomps on his head, while other footage seems to suggest this was followed by a sly knee to the skull. Another incident emerged in which police put a woman into a chokehold for not wearing a mask.

Civil Liberties groups have expressed their concern at the actions of police over the course of the past week, and the Human Rights Law Centre has called on the Victorian government and Victoria police to be open and transparent around the justification of the police response, including showing how much Covid-19 transmission has occurred during protests.

Australia watched on in disbelief as the violence on Melbourne streets escalated over the past week, with hoards of heavily armed police officers clashing with members of the public protesting against extended lockdowns and vaccination mandates.

The mainstream media has focused heavily on violence and offensive acts allegedly committed by protesters, was largely overlooking the many instances of police brutality – whereby officers used excessive force to perform arrests and engaged in conduct amounting to dangerous assaults against members of the public.

The media's toying of the government line continued even in the face of police prohibiting helicopters from the Melbourne skies, in what authorities claimed was a move to prevent protesters from organising but which many saw as a way to reduce publicity of the heavy-handed enforcement approach.

Mortality rate for influenza in the U.S. in 2019-2020, by age group
Published by John Eilstein, Oct 7, 2021

The mortality rate from influenza in the United States is by far highest among those aged 65 years and older. During the 2019-2020 flu season the mortality rate from influenza for this age group was around 22 per 100,000 population. Influenza and pneumonia are currently the ninth leading cause of death in the U.S. [statista.com/statistics/1127799/influenza-us-mortality-rate-by-age-group/](https://www.statista.com/statistics/1127799/influenza-us-mortality-rate-by-age-group/)

You could also substitute the word Covid for influenza in this graph as both pose a comparable age risk profile.

COVID-19 RISK: OLD & YOUNG

COMPARED TO THE MOST AT-RISK POPULATION (80+ YEAR OLDS) EVERY 20 YEARS YOUNGER ACCOUNTS FOR A LOWERING OF RISK BY 10X

80 YEARS OLD
Risk: 1 x 1 x 1
Most at risk

60 YEARS OLD
Risk: 10 x 1 x 1
10x lower

40 YEARS OLD
Risk: 10 x 10 x 1
100x lower

20 YEARS OLD
Risk: 10 x 10 x 10
1000x lower

A 20-YEAR OLD IS 1000 TIMES LESS LIKELY TO DIE FROM C19!

BASED ON DATA FROM DAVID SPIEGELHALTER PUBLISHED BY THE NIXON CENTER FOR RISK AND EVIDENCE, UNIVERSITY OF CAMBRIDGE

Those trail vaccines again

What we know:

- Vaccinated people can still get infected.
- Vaccinated people can still die of Covid.
- Vaccinated people can still transmit Covid.
- Covid mortality when aged under 20 years is really tiny.
- Unapproved, emergency-only mRNA trail vaccines are limited in their function and certainly not the cure as it was initially sold/promised. It even wears off quickly. More jabs.

Advantages:
Less chance for older people to die, but no guarantees.
Mostly, it's safe to take a jab or two. But three, four, five etc?

Disadvantages:
Possible dangerous, even deadly, side effects.
Unknown long-term effects.
Limited functionality. It does not stop Covid from spreading.

Why the constant one-sided propaganda?
Why not wait until the product has been approved?
Why discriminate against those who are sceptical?

Eventually, the truth will prevail. Hopefully soon.

Great news! What do you think, MSM?

A Freezing Antarctic Winter Shatters Records

Temperatures hit as low as -144 degrees Fahrenheit. -98°C

by ELLIE GARDEY

October 7, 2021, 12:54 PM

Antarctica just logged its coldest winter on record, with average temperatures hitting a blustery -78 degrees Fahrenheit. Individual temperatures hit as low as -144 degrees Fahrenheit. This is the coldest South Pole winter since records began in 1957.

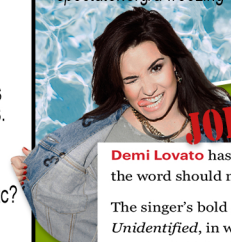

The dramatically cold temperatures are part of what some scientists see as a larger cooling pattern in Antarctica. NASA published a study in 2015 which showed that the Antarctic ice sheet had gained billions of tons of ice each year for decades. That included a net gain of 82 billion tons of ice per year between 2003 and 2008.

Scientists said that Antarctica's winter was so cold because of a polar vortex, a region of cold air that encircled the continent.

The Washington Post, meanwhile, called the cold winter "an anomaly."

spectator.org/a-freezing-antarctic-winter-shatters-records/

Yes, yes. Of course.

JOKE OF THE DAY

Demi Lovato has said referring to extraterrestrials as "aliens" is derogatory and the word should no longer be used for potential otherworldly visitors.

The singer's bold comments came while promoting the new documentary *Unidentified*, in which they embark on a road trip to investigate the truth about perceived UFO phenomena.

Speaking to *E! News*, Lovato explained their reasoning while responding to fan speculation that they have a new unreleased song called "Aliens."

Quashing the rumor, the singer said their fans should know they don't call them "aliens" because it is a "derogatory term for anything."
