

MEDIA = VIRUS

GAME OVER

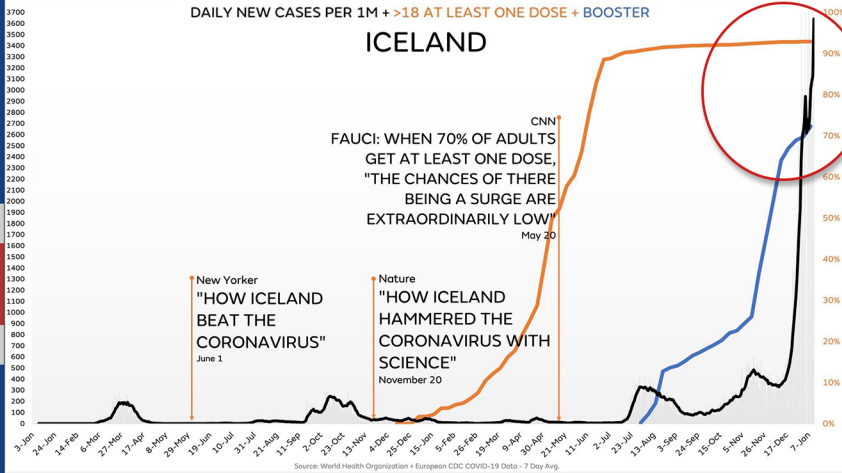

It's over. Covid has to make way for a new crisis. Perhaps it's brewing war scenarios between Russia & Ukraine and also between China & Taiwan. Who knows? Either way, 2022 will probably be a better year for the millions who were displaced, restricted and their rights trampled upon. Vaccine effectiveness has become a really hard sell. MSM has a new mandate: defend the opening of countries and abandonment of restrictions. Naturally, they are in agreement with these new positive developments. They have to save face and must now be seen as both freedom fighters and public protectors. It's too late for that: We Will Never Forget And Never Forgive. MSM has failed on so many levels. Rather start playing PacMan, MSM.

Reality

QUOTE: It ain't what you don't know that gets you into trouble. It's what you know for sure that just ain't so - Mark Twain

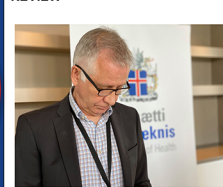

DAILY NEW CASES PER 1M + >18 AT LEAST ONE DOSE + BOOSTER

ICELAND

345,000 people live in Iceland. 760,800 doses of Covid vaccines were injected into people. 80% of the population is fully vaccinated against Covid. 70% took a booster vaccine. Help! as at 25/01/2022. arcgis.com/apps/dashboards/bda7594740fd40299423467b48e9ecf6

ICELAND REVIEW

COVID-19 in Iceland: Vaccination Has Not Led to Herd Immunity, Says Chief Epidemiologist

Graph on the left is self-explanatory. Covid vaccines were designed for the initial Wuhan/Beta variants.

Seasonal flu vaccines differ annually to combat new variants.

The Omicron variant beats present Covid vaccines and seems therefore pretty much useless.

Pfizer CEO backtracks on job effectiveness, admits two shots offer 'very limited protection'

"We know that the two doses of the vaccine offer very limited protection, if any," said Pfizer CEO and Chairman Albert Bourla in a Monday interview with Yahoo Finance.

"'cause my products' not working so well?"

Why would a 3rd or even a 4th shot work? This makes no sense.

lifesitenews.com/news/pfizer-ceo-claimed-covid-jabs-were-100-effective-now-says-2-shots-offer-very-limited-protection-if-any/

Reaction

End Game? Treating it like a bad flu it always was. Accept the virus. Déjà vu for M=V.

New research reveals surprise twist in Australia's brutal Covid lockdowns

We've been in the grip of the devastating pandemic for almost two years - but new research has revealed an unexpected upside.

www.foxnews.com/health/covid-19/australia-research-reveals-surprise-twist-lockdowns

Protesters gathered outside the 7 Times building in Melbourne on Saturday, January 15, with some in the crowd also calling for New Zealand to be allowed.

While Covid-19 has claimed millions of lives across the globe, new research has revealed many Australians have actually benefited from the public health crisis.

According to an Australian National University study recently published in the *International Journal of Epidemiology*, our life expectancy increased during the first year of the pandemic.

Europe considers new COVID-19 strategy: Accepting the virus

By ARITZ PARRA January 20, 2022

Australia has decided to 'let Covid rip.' Is that a good idea?

In just over a month, the country's Covid cases have sharply risen from around 1,000 a day to more than 100,000 a day - but its deaths remain low.

U.S. People using face masks attend a music concert in Barcelona. The Spanish government is laying the ground for a new strategy to treat the next infection surge not as an emergency but as an illness that is here to stay. Similar steps are under consideration in neighboring Portugal and in Britain.

MADRID (AP) — When the coronavirus pandemic was first declared, Spaniards were ordered to stay home for more than three months. For weeks, they were not allowed outside even for exercise. Children were banned from playgrounds, and the economy virtually stopped.

But officials credited the draconian measures with preventing a full collapse of the health system. Lives were saved, they argued.

Now, almost two years later, Spain is preparing to adopt a different COVID-19 playbook. With one of Europe's highest vaccination rates and its most pandemic-battered economies, the government is laying the groundwork to treat the next infection surge not as an emergency but as an illness that is here to stay. Similar steps are under consideration in neighboring Portugal and in Britain.

No more lockdowns – what 'living with Covid' means as Plan B restrictions end

EXPLAINED

The Government believes the UK has passed the 'test' of Omicron – but polling experts think Boris Johnson will not benefit from an end-of-Plan-B bounce

It's safe to head back to the office, ministers told England's workers this week. Next week mandatory Covid passes will go and the masks can come off too, as Plan B legal restrictions designed to curtail the rise of the Omicron variant are lifted.

In Scotland, restrictions on nightclubs, large indoor events and social mixing are being phased out and nightclubs will reopen on Friday.
